SUMMARY

Data & AI Engineer with a strong foundation in computer engineering and business management, combining 7+ years of hands-on experience in data analysis, system development, and IT infrastructure across banking and enterprise sectors. Proven ability to trans-late complex data into actionable insights and build scalable systems including a tax automation system serving 15,000+ employees that reduced processing time by 97%, and managing IDR 350B funding portfolio at PT Bank Rakyat Indonesia. Currently advancing expertise in Machine Learning and AI Engineering through Hacktiv8 intensive program, with practical experience in Neural Networks, computer vision, and IoT-based data processing. Passionate about engineering intelligent data pipelines and deploying ML models that drive real business value.

EDUCATION

Hacktiv8 <i>Data Science & AI Machine Learning</i>	Jakarta, Indonesia <i>Mei 2026 – July 2026</i>
Universitas Airlangga Surabaya <i>Master of Management Business (GPA 3.64/4.00)</i>	Surabaya, Indonesia <i>2020 – 2022</i>
Universitas Dinamika Surabaya <i>Bachelor of Computer Engineering (GPA 3.81/4.00)</i>	Surabaya, Indonesia <i>2015 – 2019</i>

WORK EXPERIENCE

PT Bank Rakyat Indonesia <i>IT Staff</i>	Surabaya, Indonesia <i>2021 – 2026</i>
Trusted by branch manager to transform raw business data across branch, sub-branch, and unit offices into actionable insights for strategic decision-making. Responsible for monitoring IT infrastructure including network, servers, CCTV, ATM/CRM, EDC, and end-user devices while coordinating with head office and vendors. - Transformed raw business data into strategic insights for branch performance evaluation - Maintained IT infrastructure ensuring minimal downtime across supervised units - Achieved 100% ATM/CRM reliability through proactive monitoring and vendor coordination - Maintained 95% EDC reliability through merchant monitoring and troubleshooting - Ensured CCTV monitoring and backup availability across operational units	
PT Arina Multikarya <i>IT Support and Developer</i>	Surabaya, Indonesia <i>2020 – 2021</i>
Responsible for developing internal business applications, maintaining server and network infrastructure, and implementing workforce monitoring systems used nationwide. Built tax processing system and GPS-based attendance system to improve operational efficiency. - Developed PPh21 tax system for 15,000 employees reducing processing time from 1 day to 30 minutes - Built GPS-based attendance system used by 15,000 employees across Indonesia - Implemented leave, sick, and permission tracking features for workforce monitoring - Maintained server reliability with daily monitoring and preventive maintenance - Developed IT asset inventory system minimizing asset loss	

PT Total Quality

Surabaya, Indonesia

Full Stack Developer

2019 – 2020

Worked closely with CEO to develop web and mobile applications for agenda management and Change Agent ranking across corporate clients while managing company profile websites. Developed real-time brainwave monitoring integration to support data-driven motivation treatment.

- Delivered platform used by 37 corporate clients
- Increased workforce productivity by 25% and reduced operational cost by 8%
- Developed real-time brainwave monitoring application
- Led development team of 3 engineers

SKILLS

Language: Python, SQL, C#, C/C++, PHP, JavaScript

Libraries: Pandas, Numpy, OpenCV, Matplotlib, Seaborn, Scikit-Learn, PyTorch, TensorFlow, FastApi, Selenium, BeautifulSoup, Apache Sprak

Tools/Platform: Git, Docker, Anaconda, Jupyter Notebook, Google Colab, Visual Studio Code, Microsoft Excel, Apache Airflow

Database: PostgreSQL, MySQL, SQL Server, BigQuery, MongoDB

AI & Data: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Large Language Models (LLMs), Elasticsearch, Redis

Data Visual: Tableau, Power BI, Kibana, Microsoft PowerPoint

PROJECTS

Automatic Indonesian News Classification using Deep Learning (ANN) 2026

Project Description: Designed and deployed an end-to-end NLP classification system for 32,318 Indonesian news headlines, automatically categorizing articles into five editorial topics using an ensemble of deep learning models. Built a reproducible text preprocessing pipeline featuring Indonesian text normalization, tokenization, class imbalance handling, and leakage-safe train-validation-test splitting. Improved model performance by combining three TextCNN architectures with a Word2Vec-pretrained TextCNN through soft voting, achieving 89.29% F1-Macro and 89.89% test accuracy. Productionized the solution as a multi-page Streamlit application with batch inference, confidence-based review, EDA dashboard, and model serialization for real-world editorial workflows.

Technology / Tools: Python, TensorFlow/Keras, Gensim (Word2Vec), Scikit-learn, Pandas, NumPy, Sastrawi, Matplotlib, Seaborn, Streamlit, Git/GitHub.

Investor Risk Profile Classification for MiFID II Compliance 2026

Project Description: Built an end-to-end 4-class classification system (Conservative, Income, Balanced, Aggressive) on 21,000+ investor records to support MiFID II-driven suitability assessments for Relationship Manager and Compliance teams. Engineered a leakage-safe preprocessing pipeline (stratified train-test split, IQR-based outlier capping, ColumnTransformer with StandardScaler and hybrid One-Hot/Ordinal encoding) after validating feature relevance through ANOVA F-tests and Chi-Square tests, and resolved multicollinearity via correlation-driven feature selection. Benchmarked 5 algorithms (KNN, SVM, Decision Tree, Random Forest, XGBoost) via 5-fold cross-validation, then optimized the best performer through RandomizedSearchCV, improving F1-Macro by ~1.3 points over baseline while ensuring zero high-risk misclassifications (e.g., no Conservative investor ever misclassified as Aggressive), a critical safety property for regulatory risk tooling. Deployed the final model as an interactive Streamlit web app on Hugging Face Spaces with a custom preprocessing transformer module for production-safe model serialization.

Technology / Tools: Python, Pandas, NumPy, Scikit-learn, XGBoost, SciPy (Stats), Matplotlib, Seaborn, Streamlit, Hugging Face Spaces, Git/GitHub.

Pizza Sales Performance 2025 & Q1 Projection 2026 2026

Project Description: Analyzed a large-scale dataset of over 50,000 historical retail transactions to identify operational inefficiencies and revenue-generating patterns to support a 20% Q1 growth target. Engineered a robust data cleansing pipeline in Python to resolve critical time-delta anomalies and formatted structured CSV inputs for Tableau. Conducted descriptive statistics (Skewness & Kurtosis)

and inferential hypothesis testing (Independent T-Test) to scientifically validate a high-margin "Golden Hour" during lunch peaks, creating an interactive Executive Dashboard that transformed raw data into actionable inventory and promo strategies.

Technology / Tools: Python, Pandas, NumPy, SciPy (Stats), Matplotlib, Seaborn, Tableau Desktop, Microsoft Excel.

Medical Report CRR

2021

Project Description: Developed a web-based medical report platform designed to streamline and automate the processing of credit recovery data into an interactive summary dashboard. Integrated MySQL databases with a CodeIgniter and Bootstrap frontend to handle data migration, reducing manual reporting time by **70%** and improving data visualization accuracy for stakeholders.

Technology / Tools: PHP, CodeIgniter, PostgreSQL, JavaScript, Bootstrap, CSS, Microsoft Excel.

Computer Vision – Detector Object

2018 - 2019

Project Description: Developed a real-time object detection system for a wheeled soccer robot competing in the Indonesian Wheeled Soccer Robot Contest (KRSBI-Beroda). Engineered color and shape detection algorithms to identify the orange ball with a **92% detection accuracy**. Integrated a Raspberry Pi for high-level image processing via Python and OpenCV, and established serial communication with an Arduino Due microcontroller to optimize autonomous robotic navigation and movement.

Technology / Tools: Python, OpenCV, Raspberry Pi, Arduino Due, Microcontroller, Computer Vision.
